

WEATHER STRIP INSTALLATION INSTRUCTIONS

STEP 1: To remove old weather strip, simply pull out of aluminum track. If you are removing weather strip from a window, you must use a razor knife to cut it in half lengthwise. See FIG. 1.

STEP 2: To install the new weather strip, first determine the length needed. Using a pair of scissors, mark and cut the weather strip to the proper length. Using a flat blade screwdriver, push the weather strip into the track along the entire length of the part. See FIG. 2.
